

Building Java Programs Textbook mapping to Shoreline's CS141: Java I

Key: **Core Concept** **Recommended**

Chapter	Topics	Week	Day
Chapter 1: Introduction to Java Programming	<p>1.1 Basic Computing Concepts</p> <ul style="list-style-type: none"> Why Programming? Hardware and Software The Digital Realm Why Java? The Process of Programming The Java Programming Environment <p>1.2 And Now--Java</p> <ul style="list-style-type: none"> String Literals (Strings) System.out.println Escape Sequences print versus println Identifiers and Keywords A Complex Example: DrawFigures1 Comments and Readability <p>1.3 Program Errors</p> <ul style="list-style-type: none"> Syntax Errors Logic Errors (bugs) <p>1.4 Procedural Decomposition</p> <ul style="list-style-type: none"> Static Methods Flow of Control Methods That Call Other Methods An Example Runtime Error <p>1.5 Case Study: DrawFigures</p> <ul style="list-style-type: none"> Structured Version Final Version without Redundancy Analysis of Flow of Execution 	1	01

Chapter	Topics	Week	Day
Chapter 2: Primitive Data and Definite Loops	<p>2.1 Basic Data Concepts</p> <ul style="list-style-type: none"> • Primitive Types • Expressions • Literals • Arithmetic Operators • Precedence • Mixing Types and Casting <p>2.2 Variables</p> <ul style="list-style-type: none"> • Assignment/Declaration Variations • String Concatenation • Increment/Decrement Operators • Variables and Mixing Types <p>2.3 The for Loop</p> <ul style="list-style-type: none"> • Tracing for Loops • for Loop Patterns • Nested for Loops <p>2.4 Managing Complexity</p> <ul style="list-style-type: none"> • Scope • Pseudocode • Class Constants <p>2.5 Case Study: A Complex Figure</p> <ul style="list-style-type: none"> • Problem Decomposition and Pseudocode • Initial Structured Version • Adding a Class Constant • Further Variations 	1	02
Chapter 3: Introduction to Parameters and Objects	<p>3.1 Parameters</p> <ul style="list-style-type: none"> • The Mechanics of Parameters • Limitations of Parameters • Multiple Parameters • Parameters Versus Constants • Overloading of Methods <p>3.2 Methods that Return Values</p> <ul style="list-style-type: none"> • The Math Class • Defining Methods that Return Values <p>3.3 Using Objects</p> <ul style="list-style-type: none"> • String Objects • Interactive Programs and Scanner Objects • Sample Interactive Program <p>3.4 Case Study: Projectile Trajectory</p> <ul style="list-style-type: none"> • Unstructured Solution • Structured Solution 	2	03

Chapter	Topics	Week	Day
Supplement 3G: Graphics	3G.1 Introduction to Graphics <ul style="list-style-type: none"> DrawingPanel Drawing Lines and Shapes Colors Drawing with Loops Text and Fonts Images 3G.2 Procedural Decomposition with Graphics <ul style="list-style-type: none"> A Larger Example: DrawDiamonds 3G.3 Case Study: Pyramids <ul style="list-style-type: none"> Unstructured Partial Solution Generalizing the Drawing of Pyramids Complete Structured Solution 	2	04
Chapter 4: Conditional Execution	4.1 if/else Statements <ul style="list-style-type: none"> Relational Operators Nested if/else Statements Object Equality Factoring if/else Statements Multiple Conditions 4.2 Cumulative Algorithms <ul style="list-style-type: none"> Cumulative Sum Min/Max Loops Cumulative Sum with if Roundoff Errors 4.3 Text Processing <ul style="list-style-type: none"> The char Type char versus int Cumulative Text Algorithms System.out.printf 4.4 Methods with Conditional Execution <ul style="list-style-type: none"> Preconditions and Postconditions Throwing Exceptions Revisiting Return Values Reasoning about Paths 4.5 Case Study: Body Mass Index <ul style="list-style-type: none"> One-person Unstructured Solution Two-person Unstructured Solution Two-person Structured Solution Procedural Design Heuristics 	3	05, 06

Chapter	Topics	Week	Day
Chapter 5: Program Logic and Indefinite Loops	5.1 The while Loop <ul style="list-style-type: none"> A Loop to Find the Smallest Divisor Random Numbers Simulations The do/while Loop 5.2 Fencepost Algorithms <ul style="list-style-type: none"> Sentinel Loops Fencepost with if 5.3 The boolean Type <ul style="list-style-type: none"> Logical Operators Short-Circuited Evaluation boolean Variables and Flags Boolean Zen Negating Boolean Expressions 5.4 User Errors <ul style="list-style-type: none"> Scanner Lookahead Handling User Errors 5.5 Assertions and Program Logic <ul style="list-style-type: none"> Reasoning About Assertions A Detailed Assertions Example 5.6 Case Study: NumberGuess <ul style="list-style-type: none"> Initial Version without Hinting Randomized Version with Hinting Final Robust Version 	4	07, 08
Midterm	Chapters 1-5	5	09, 10
Chapter 6: File Processing	6.1 File Reading Basics <ul style="list-style-type: none"> Data, Data Everywhere File Basics Reading a File with a Scanner 6.2 Details of Token-Based Processing <ul style="list-style-type: none"> Structure of Files and Consuming Input Scanner Parameters Paths and Directories A More Complex Input File 6.3 Line-Based Processing <ul style="list-style-type: none"> String Scanners and Line/Token Combinations 6.4 Advanced File Processing <ul style="list-style-type: none"> Output Files with <code>PrintStream</code> <ul style="list-style-type: none"> Guaranteeing that Files Can Be Read 6.5 Case Study: ZIP Code Lookup	6	11, 12

Chapter	Topics	Week	Day
Chapter 7: Arrays	<p>7.1 Array Basics</p> <ul style="list-style-type: none"> Constructing and Traversing an Array Accessing an Array A Complete Array Program Random Access Arrays and Methods The For-Each Loop Initializing Arrays The Arrays Class <p>7.2 Array Traversal Algorithms</p> <ul style="list-style-type: none"> Printing an Array Searching and Replacing Testing for Equality Reversing an Array String Traversal Algorithms <p>7.3 Reference Semantics</p> <ul style="list-style-type: none"> Multiple Objects <p>7.4 Advanced Array Techniques</p> <ul style="list-style-type: none"> Shifting Values in an Array Arrays of Objects Command Line Arguments Nested Loop Algorithms <p>7.5 Multidimensional Arrays</p> <ul style="list-style-type: none"> Rectangular Two-Dimensional Arrays Jagged Arrays <p>7.6 Arrays of Pixels</p> <p>7.7 Case Study: Benford's Law</p> <ul style="list-style-type: none"> Tallying values Completing the Program 	7	13, 14

Chapter	Topics	Week	Day
Chapter 8: Classes	<p>8.1 Object-Oriented Programming</p> <ul style="list-style-type: none"> • Classes and Objects • Point Objects <p>8.2 Object State and Behavior</p> <ul style="list-style-type: none"> • Object State: Fields • Object Behavior: Methods • The Implicit Parameter • Mutators and Accessors • The toString Method <p>8.3 Object Initialization: Constructors</p> <ul style="list-style-type: none"> • The Keyword this • Multiple Constructors <p>8.4 Encapsulation</p> <ul style="list-style-type: none"> • Private Data Fields • Class Invariants • Changing Internal Implementations <p>8.5 Case Study: Designing a Stock Class</p> <ul style="list-style-type: none"> • Object-Oriented Design Heuristics • Stock Fields and Method Headers • Stock Method and Constructor Implementation 	8	15, 16

Chapter	Topics	Week	Day
Chapter 9: Inheritance and Interfaces	9.1 Inheritance Basics <ul style="list-style-type: none"> • Non-programming Hierarchies • Extending a Class • Overriding Methods 9.2 Interacting with the Superclass <ul style="list-style-type: none"> • Calling Overridden Methods • Accessing Inherited Fields • Calling a Superclass's Constructor • DividendStock Behavior • The Object Class • The equals Method • The instanceof Keyword 9.3 Polymorphism <ul style="list-style-type: none"> • Polymorphism Mechanics • Interpreting Inheritance Code • Interpreting Complex Calls 9.4 Inheritance and Design <ul style="list-style-type: none"> • A Misuse of Inheritance • Is-a versus Has-a Relationships • Graphics2D 9.5 Interfaces <ul style="list-style-type: none"> • An Interface for Shapes • Implementing an Interface • Benefits of Interfaces 9.6 Case Study: Financial Class Hierarchy <ul style="list-style-type: none"> • Designing the Classes • Redundant Implementation • Abstract Classes 	9	17
Chapter 10: ArrayLists	10.1 ArrayLists <ul style="list-style-type: none"> • Basic ArrayList Operations • ArrayList Searching Methods • A Complete ArrayList Program • Adding to and Removing from an ArrayList • Using the For-Each Loop with ArrayLists • Wrapper Classes 10.2 The Comparable Interface <ul style="list-style-type: none"> • Natural Ordering and compareTo • Implementing the Comparable Interface 10.3 Case Study: Vocabulary Comparison <ul style="list-style-type: none"> • Some Efficiency Considerations • Version 1: Compute Vocabulary • Version 2: Compute Overlap • Version 3: Complete Program 	9	18, 19
Final Review	Chapters 1-10	10	20
